# How would we like to do inference?

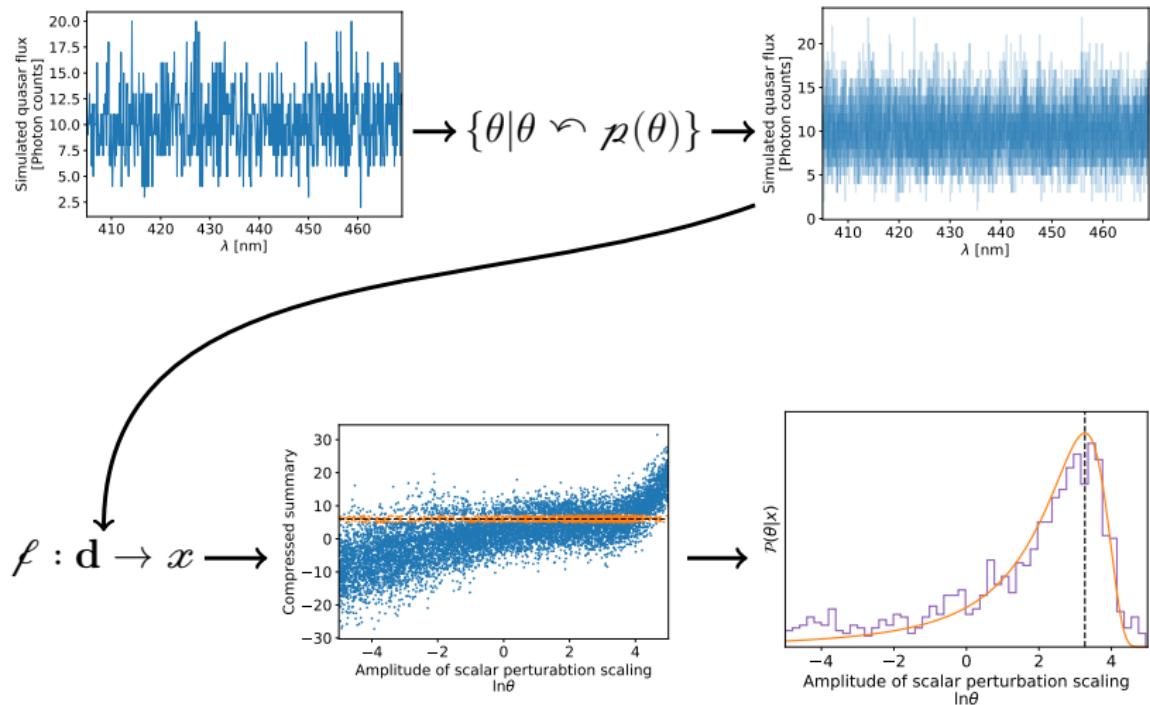

$$\mathcal{L}(\mathbf{d}|\theta)$$

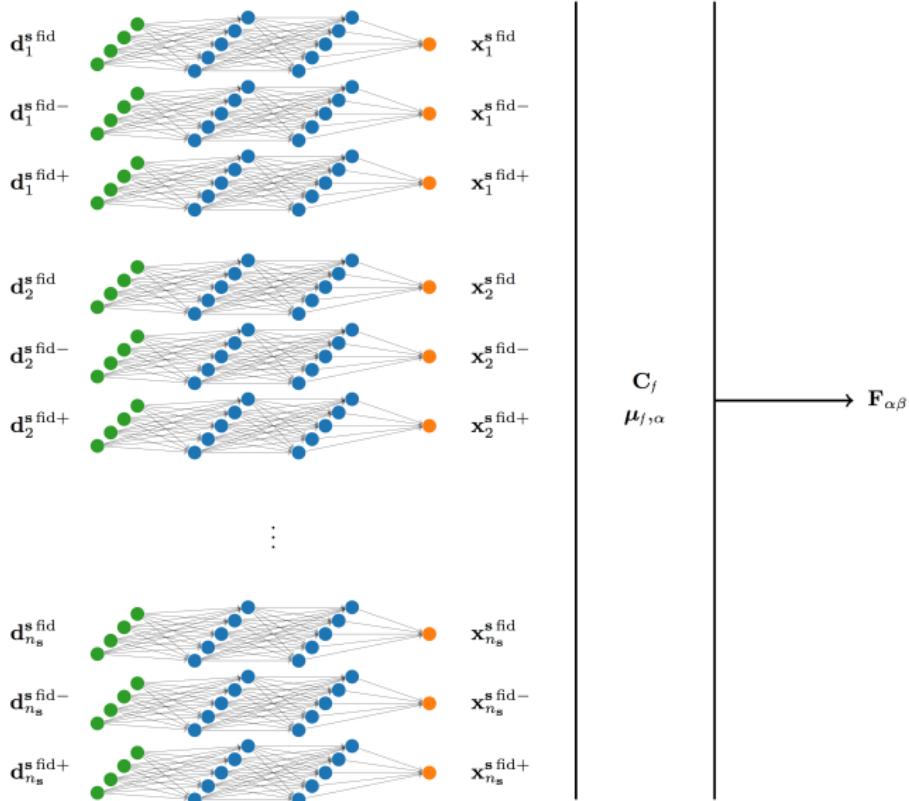

$$\mathcal{P}(\theta|\mathbf{d}) = \frac{\mathcal{L}(\mathbf{d}|\theta) p(\theta)}{p(\mathbf{d})}$$

# How can we do inference without a likelihood?

# How can we find the summaries?

# Automatic physical inference with information maximising neural networks

- ▶ Simulate data at a fiducial parameter value
- ▶ Train the network to increase the Fisher information
- ▶ Compress real data using trained network
- ▶ Do ABC with the optimally compressed summaries

# Automatic physical inference with information maximising neural networks
